HVLP Paint Sprayers BUILT TO LAST Thank you for purchasing a Campbell Hausfeld product. Page 4 HV2100, HV2105 Operating Instructions and Parts Manual HVLP Paint Sprayers See Table 1. How Your HVLP System Works Your turbine system has three components the turbine unit, an air hose and a spray gun. The turbine unit, when connected to the correct electrical power supply and powered on,

provides a continuous source of clean, warm, dry, High Volume Low Pressure air. The air hose connects the turbine unit to the spray gun. Air flows through the hose to the nozzle of the specially designed spray gun. Page 5 Operating Instructions and Parts Manual HV2100, HV2105 HVLV Paint Sprayers Be sure the electric current is the correct voltage. If you need to use an extension cord, be sure it is at least 12 gauge wire and has a correctly grounded outlet. 3. Select a safe, well ventilated area where you will spray your work piece. Locate your turbine unit away from the area where you will be directly spraying. Do not cover or enclose the turbine. Page 6 Operating Instructions and Parts Manual HV2100, HV2105 HVLV Paint Sprayers Table 4. HVLV Turbine Properties Each turbine unit offers the finisher a maximum operating pressure. This pressure is determined by the size and output of the unit you have selected. The maximum available pressure will have a direct bearing upon the viscosity of the fluid that you choose to spray. Page 7 Operating Instructions and Parts Manual HV2100, HV2105 HVLV Paint Sprayers fan type see Spray Gun Diagrams, opening the material flow knob counterclockwise and moving the spray gun closer or further away from your work piece. A little practice will enable you to master this technique. Practice Practice using your spray gun by following these steps 1. Remove the cup from your spray gun.

Fill it halfway with some water. 2. Attach the cup to the body of the spray gun. 3. Page 8 HV2100, HV2105 Operating Instructions and Parts Manual HVLV Paint Sprayers to side See Figure 3. Move the spray gun across your work from end to end. Be sure to maintain the same speed of movement. This will ensure an even application of coating. Always release the trigger at the end of a pass. If you have dry spots, you have overlapped too widely. NOTE Do not place pressure pot onto the cart or insert handle into cart base until the turbine unit is firmly bolted and secured to the cart. Using the cart without the turbine installed can result in the cart tipping over. AttachING Turbine Unit to Cart 1. Page 10 HV2100, HV2105 Operating Instructions and Parts Manual HVLV Paint Sprayers using a cross pattern, rotating an even amount of pressure on each one until each is tight and secure. Additional Instructions for Model HV2105 3F485 Cont. If you are using an extension cord, it is imperative to use at least a 12 gauge cord to avoid damage to electrical components. Page 11 Operating Instructions and Parts Manual HV2100, HV2105 HVLV Paint Sprayers Maintenance TURBINE MAINTENANCE The turbine unit needs very little maintenance. The motor has sealed bearings that are prelubricated. No service is necessary. Periodically, the turbine air filters and prefilters should be examined. Clean filters are critical to good performance and equipment longevity. Your turbine has 2 replaceable filters see Turbine Repair Parts on page 13. Able to tackle all of your home, farm and commercial painting needs, this spray gun can conveniently handle all paints and materials. And speaking of convenience, the spray gun can be converted from pressure to siphon feed and internal or external mix air caps. Changing it from siphon to pressure feed only requires the twist of a knob. That's it! the conversions dont stop there either the spray gun can be converted so you can use it with a separate pressure paint tank; and you can even convert it from nonbleeder to bleeder style, allowing you to use it with standard or tankless air compressors. There's also a pattern control feature that adjusts Fan size for truly improved results. Campbell hausfeld's general purpose spray gun nicely works in conjunction with paint tanks and remote canisters, includes a fluid canister, has a 4.3 average SCFM requirement at 90 psi, and a inch male NPS air inlet. Those old brushes and rollers are looking pretty useless right about now. It features pattern control, to adjust fan pattern size, and is convertible from a nonbleeder to a bleeder style for use with standard or tankless air compressors. The DH5300 works with paint tanks or remote canisters for tough to reach areas. Videos for related products 313 Click to play video Graco 16Y385 TrueCoat 360 Paint Sprayer Graco Inc. on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Joseph Griswold 5.0 out of 5 stars Its not a five hundred dollar gun and Im not a professional painter but I took my time, read the directions and got it done with two good coats.the shutters look like new.I also used a small portable tank compressor so for me I took it to its outer limits but it still did the job.I previously had a Binks model 35 that was just super but now discontinued.I replaced it with a Binks Model 25 that lasted one spray session. I recently sprayed acrylic enamel with this gun and it worked flawlessly. This gun hopefully will spray latex and most liquids. The nice thing about Campbell Hausfeld is that on their web page you can purchase individual parts or parts kits. I called CH and they sent a replacement part immediately. So I give a A for both Amazon and CH.I chose this due to sold construction and something I was familiar with. Once I tried a gravity fed gun, this became the primer gun and something for non critical work. I will never go back.I always had to angle the gun upwards for it to spray the paint. If I held the gun level or at a downward angle, it would only be air coming out. Spend a little more and buy a reliable sprayer.Was used and was listed a such and had a little residue and stuck parts but was usable.It is very durable and easy to clean and is priced extremely competitive.Does the job.Much better for small projects than the airless sprayer I was using. Cleanup is a snap after use, with very little wasted paint.
