# 02 polaris sportsman 500 ho manual

It contains important safety information. It contains important safety information. This is an adult vehicle only. Operation is prohibited for those under 16 years of age. A card containing important ATV safety information should be attached to the owners manual on the next page. If you cannot locate this card, or if it has been removed, please call 1800 3423764 for assistance. Many years of experience have gone into the engineering, design, and development of your Polaris vehicle, making it the finest machine we've ever produced. Copyright 2009 Polaris Sales Inc. All information contained within this publication is based on the latest product information at the time of publication. Due to constant improvements in the design and quality of production components, some minor discrepancies may result between the actual vehicle and the information presented in this publication. Your safety is involved when these words and symbols are used. Become familiar with their meanings before reading the manual. The safety alert symbol indicates a potential personal injury hazard. WARNING A WARNING indicates a hazardous situation which, if not avoided, may result in death or serious injury. A Polaris ATV is not a toy and can be hazardous to operate. This vehicle handles differently than other vehicles, such as motorcycles and cars. Remove the spare key and store it in a safe place. An ignition key can be duplicated only by ordering a Polaris key blank using your key number and mating it with one of your existing keys. If you purchased a used Polaris ATV in the United States, you can enroll in the ATV RiderCourse for a fee. Call ATV Enrollment Express at 800 8872887 or visit [www.atvsafety.org](http://www.atvsafety.org). Whenever riding a Polaris vehicle, always wear a helmet that meets or exceeds established safety standards. Approved helmets in the USA and Canada bear a U.S. Department of Transportation DOT label. <http://conquistadoresgeneralcontracting.com/atomicsteps/upload/userfiles/colt-m4a1-carbine-ai-soft-manual.xml>

When ever riding a Polaris vehicle, always wear shatterproof goggles or use a shatterproof helmet face shield. Polaris recommends wearing approved Personal Protective Equipment PPE bearing markings such as VESC 8, V8, Z87.1, or CE. Heed all safety warnings outlined in this section of the owner's manual. See the OPERATION section of the owner's manual for proper operating procedures. Operator and passenger must always wear an approved helmet that fits properly and eye protection goggles or face shield. Avoid operating the ATV on pavement. ATV tires are designed for offroad use. If the operators foot is not firmly planted on the footrest, it could also contact the rear wheels. NOTE A special technique is required when braking while traveling down hill. Do not operate on excessively rough, slippery or loose terrain. Always follow proper operating procedures as outlined in this manual. See page 57. Before shifting into reverse gear, always check for obstacles or people behind the ATV. Avoid operating the ATV through deep or fastflowing water. If its unavoidable to enter water that exceeds the recommended maximum depth see page 55. Never operate the ATV on a frozen body of water. Poor Visibility Operating the ATV in darkness or inclement weather could result in a collision or accident, especially if operating on a road or street. Replacement safety labels are provided by Polaris at no charge. The part number is printed on the label. Doing so can cause part failure, possible imbalance, and excessive engine RPM, which can result in serious injury or death. To gain additional wheel speed while backing, release the throttle

and depress the override button. The engine will not start or run when the switch is off. Both the main switch and the engine stop switch will shut off all electrical power to the vehicle, including lights. Engine speed returns to idle when the lever is released. <http://dylogistics.com/userData/board/colt-m4-technical-manual.xml>

This ATV is equipped with Polaris Electronic Throttle Control ETC, which is designed to reduce the risk of a frozen or stuck throttle. If the. Never operate the ATV with a spongy feeling brake lever. Always contact your dealer for service before operating the vehicle. Squeeze the brake lever toward the handlebar to apply the front and rear brakes. Maintain brake fluid at the recommended level. Do not overfill. Never store or use a partial bottle of brake fluid. Brake fluid is hygroscopic, meaning it rapidly absorbs moisture from the air. Never back down a hill. Use caution when applying the auxiliary brake. Do not aggressively apply the auxiliary brake when going forward. Refer to the engine starting procedure on page 46 for correct choke and throttle settings during starting. Fuel Valve The fuel valve is located under the front storage box cover. OFF For vehicle storage and when transporting. H High Gear L Low Gear N Neutral R Reverse P Park To shift gears, brake to a complete stop. When the engine is idling, move the lever to the desired gear. When the switch is on 2X4, the ATV is in two wheel drive at all times. When the switch is on AWD, the ATV is in all wheel drive and the AWD indicator light Switch in the instrument cluster will be. In addition to showing vehicle speed, the speedometer needle flashes when a warning condition exists. The instrument cluster measures distance in miles as well as hours of operation. The reverse override button is also the MODE button. See page 24. The transmission cannot be in reverse when using this feature. Odometer Mode The odometer records the miles traveled by the ATV. To exit the diagnostic mode, turn the key switch off and on. Any movement of the tires will also cause the gauge to exit the diagnostic mode. To enter the diagnostics mode 1. Tachometer Screen View the tachometer to check engine speed.

AWD Diagnostic Screen The gauge indicates whether or not current is flowing through the AWD coil only on models with switchable AWD. No single action on your part is as important as following the procedures for a proper breakin. See page 31. Always exercise extreme caution whenever handling gasoline. 2. Check the oil level on the dipstick. See page 69. Add oil if necessary to maintain the level between the safe and add marks. 3. Do not allow anyone with cognitive or physical disabilities to operate this vehicle. Find out where the designated riding areas are by contacting your Polaris dealer, a local riding club or local officials. Help keep our trails open for recreational vehicle use. As an offroad enthusiast, you represent the sport and can set a good example or a poor example for others to follow. Tip The starter interlock will prevent the engine from starting if the transmission is in gear and the brake is not engaged. Water accumulation increases as outside temperature decreases. See your Polaris dealer for engine heater kits, which provide quicker warmups and easier starting in colder weather. This means that the wheel on the outside of the turn must travel a greater distance than the inside wheel when turning and the inside tire must slip traction slightly. Improper procedure could cause loss of control or overturn. Improper procedure could cause loss of control or overturn. Avoid crossing the side of any hill unless absolutely necessary. If crossing a sidehill is unavoidable, follow these precautions 1. Applying the brakes too firmly may cause the rear wheels to lock, which could result in loss of control. Use the Kturn to turn around. 8 ft. 2.4 m 1. Stop and lock the parking brake while keeping body weight uphill. 2. Follow these procedures when operating through water 1. Determine water depths and current before entering water. 2. Be constantly alert for hazards such as logs, rocks and low hanging branches. 3.

<http://www.drupalitalia.org/node/66073>

Always follow these precautions when hauling cargo **REDUCE SPEED AND ALLOW GREATER DISTANCES FOR BRAKING WHEN HAULING CARGO.** Never install automotive accessories on your Polaris ATV. Always install Polaris approved or equivalent accessories designed for ATV use.

OPERATION Maximum. If its unavoidable, follow these precautions 1. Stop the engine. 2. Place the transmission in PARK. 3. Lock the parking brake. 4. Always block the rear wheels on the downhill side. 5. Operation on Public Lands in the U.S.A. Your Polaris vehicle has a spark arrestor that was tested and qualified to be in accordance with the USFS standard 51001c. Federal law requires that this spark arrestor be installed and functional when the vehicle is operated on public lands. When inspection reveals the need for replacement parts, use genuine Polaris parts available from your Polaris dealer. Record maintenance and service in the Maintenance Log beginning on page 129. Always have an authorized Polaris dealer perform these services. Maintenance Chart Key Perform these operations more often for vehicles subjected to severe use. Item Engine Oil Polaris Premium 4 Synthetic 0W40 Brake Fluid DOT 4 Only Transmission Oil. Oil may need to be changed more frequently if Polaris Premium 4 is not used. Follow the manufacturers recommendations for ambient temperature operation. A rising oil level between checks in cool weather driving can indicate contaminants such as gas or moisture collecting in the crankcase. Always change the oil filter whenever changing oil.

1. Position the vehicle on a level surface.
2. Start the engine. Allow it to idle for two to three minutes.
- 3.

<https://eurodente.com/images/canon-irc4080i-manual.pdf>

Place shop towels beneath the oil filter. Using an oil filter wrench, turn the filter counterclockwise to remove it.

13. Using a clean dry cloth, clean the filter sealing surface on the crank case.
14. Lubricate the oring on the new filter with a film of fresh engine oil. Maintain the oil level at the bottom of the fill plug hole threads. We recommend the use of Polaris Premium AGL Synthetic Gearcase Lubricant. See page 117 for the part numbers of Polaris products. Use of other fluids may result in improper operation of components. See page 117 for the part numbers of Polaris products. Maintain the fluid level at the bottom of the fill hole threads. Remove the fill plug. Check the fluid level.
2. Add the recommended demand drive fluid as needed to bring the level to the bottom of the fill hole threads.
3. Do not dilute with water. See page 117 for the part numbers of Polaris products. Replace the coolant any time the cooling system has been drained for maintenance or repair. These brakes are self adjusting. Under normal operation, the diaphragm extends into the reservoir as fluid level drops. If the fluid level is low and the diaphragm is not extended, a leak is likely and the diaphragm should be replaced. If loose nuts and bolts are found, see your Polaris dealer for service before operating the vehicle.

Side Panel Removal

1. Remove the seat. All service must be performed by your authorized Polaris dealer.

Wheel Removal

1. Stop the engine.
2. Place the transmission in PARK. Wash the prefilter in soapy water, then rinse and let dry. See illustration above.

1. Remove the left side panel. See page 80.
2. Remove the hose clamps from the filter and pull the filter out of the hoses. Locate and correct any short circuits that may have caused the blown fuse, then replace the fuse. Spare fuses are provided in a compartment on the top of the access door. Headlight and taillight lenses become dirty during normal operation.

<http://elmariachimexican.com/images/canon-irc3380i-user-manual.pdf>

Clean lights frequently and replace burned out lamps promptly. Always make sure lights are adjusted properly for best visibility.

Headlight Lamp Replacement

When servicing a halogen lamp, dont touch the lamp with bare fingers. Use the following procedure to make the adjustment.

1. Position the vehicle on a level surface with the headlight approximately 25 ft. 7.6 m from a wall. Place the transmission in PARK.
2. Torque spark plugs to specification. NOTICE Using nonrecommended spark plugs can result in serious engine damage. Always use Polaris recommended spark plugs.

Plug Condition

New Spark Plug Previously Installed Spark Plug Spark Plug Inspection

Spark plug condition is indicative of engine operation. There will be few combustion deposits. The

electrodes are not burned or eroded. This indicates the proper type and heat range for the engine and the service. The tip should not be flaky and white. Take the vehicle to your dealer before starting the engine. If it's impossible to take your ATV to a dealer before starting it, follow the steps outlined below. Never run the engine in an enclosed area. Remove any combustible materials from the area. Wear eye protection and leather work gloves. As engine speed increases, the force exerted on the movable drive sheave by the flyweights also increases. This, in turn, increases the amount of pinch applied to the drive belt. When removing the battery, always disconnect the negative black cable first. When reinstalling the battery, always connect the negative black cable last. **WARNING** Battery electrolyte is poisonous. It can also hinder vehicle performance. Follow the battery charging instructions on page 101 before installing the battery. Polaris recommends maintaining battery charge by using a Polaris Battery Tender charger or by charging about once a month to make up for normal self-discharge. State of Voltage Charge 100% 12.813.0 volts 75% 12.512.8 volts 50% 12.012.5 volts 25% 11.512.0 volts 0% 11.1.

5 volts or less Action specified on top of battery None, check at 3 mos. The best and safest way to clean your Polaris vehicle is with a garden hose and a pail of mild soap and water. 1. Use a professional type washing cloth, cleaning the upper body first and the lower parts last. Follow the instructions on the container. Chrome wheels exposed to road salt or salt in the air in coastal areas are more susceptible to corrosion if not properly cleaned. Follow the instructions on the container for the recommended amount. Carbon Clean removes water from fuel systems, stabilizes fuel and removes carbon deposits from pistons, rings, valves and exhaust systems. See page 109. 7. If Polaris fuel system additive is not used, the fuel tank, fuel lines, and carburetor should be completely drained of gasoline. Be sure the storage area is well ventilated. Cover the vehicle with a genuine Polaris cover. Do not use plastic or coated materials. They do not allow enough ventilation to prevent condensation, and may promote corrosion and oxidation. See your Polaris dealer. Check for fouled plugs or foreign material in gas tank or fuel lines. See your dealer. Always warm up the belt by operating below 30 mph for one mile 5 miles or more when temperature is below freezing. Polaris also gives a one year limited warranty on the final drive chain for failure due to defects. This warranty does not cover accidental damage, normal wear and tear, abuse or improper handling. This warranty also does not cover any ATV that. When requesting warranty service you must present your copy of the Warranty Registration form to the dealer. If you move or are traveling within the country where your vehicle was purchased, Warranty or Service Bulletin repairs may be requested from any authorized Polaris dealer who sells the same line as your vehicle. Polaris Industries Inc. Polaris also recommends that you use only Pure Polaris parts.
